

# WAVEFORM TOMOGRAPHY

## An introduction to theory and practice

R. Gerhard Pratt\*

A course given at Queen's University, Kingston, Ontario April  
20th-22nd, 2005

# Contents

<b>1. General Introduction</b>	<b>3</b>
<b>2. Wednesday Morning: Introduction to tomography</b>	<b>6</b>
2.1. Introduction to waveform tomography, with examples . . . . .	6
2.2. Ray theory and scattering theory . . . . .	8
2.3. Matrix inversion schemes: backprojection and backpropagation . . . . .	17
2.4. Raypaths, wavepaths and Fresnel zones . . . . .	19
<b>3. Wednesday Afternoon: Forward modelling</b>	<b>20</b>
3.1. Frequency domain finite differences . . . . .	20
3.2. How to choose parameters for frequency domain modelling . . . . .	26
3.3. <i>Computer exercise:</i> Forward modelling in the frequency domain . . . . .	29
3.4. Modelling examples . . . . .	30
<b>4. Thursday Morning: Inverse methods (1)</b>	<b>32</b>
4.1. Introduction to inverse methods . . . . .	32
4.2. Newton and gradient algorithms . . . . .	35
4.3. <i>Computer exercise:</i> An initial inversion example . . . . .	40
4.4. Illustrations of the gradient: Surface refraction configuration . . . . .	42
<b>5. Thursday afternoon: Inverse methods (2)</b>	<b>44</b>
5.1. <i>Computer exercise:</i> Inverting frequency domain data for the source . . . . .	44
5.2. How to choose parameters for frequency domain inversion . . . . .	45
5.3. <i>Computer exercise:</i> Inverting complex velocity models . . . . .	49
5.4. Problems of non-linearity . . . . .	49
5.5. Chequerboard and other synthetic examples . . . . .	51
<b>6. Friday Morning: Detailed case studies</b>	<b>54</b>
6.1. Crosshole tomography in a layered, anisotropic, sedimentary environment . .	54
6.2. Efficient frequency selection for inversion of surface data . . . . .	60
<b>7. Friday Afternoon: Further computer exercises</b>	<b>61</b>
7.1. <i>Computer exercises:</i> Introduction to the 2003 CCSS Workshop data . . . . .	61
<b>A. Basic compilation and operating instructions for FULLWV</b>	<b>64</b>
<b>B. Notes and input variables for forward modelling</b>	<b>69</b>
<b>C. Notes and input variables for inversion</b>	<b>77</b>
